The Truth Regarding Topamax Dosage For Weight Loss

Normally, the prescription drug, Topamax (or Topiramate), is used for treatment of epilepsy and also the prevention of migraine headaches. But another sudden facet impact of taking Topamax is weight loss. A reported weight loss of sixteen p.c in adults and 21 percent in children has been recorded. Health care suppliers have started prescribing sure Topamax dosage for weight loss however solely for bound situations. However because Topamax is not recommended or perhaps recognized as drug or medication for weight loss by the US Food and Drug Administration (US FDA), this becomes an “off label” prescription or use of drug.

An “off label” prescription of a explicit drug is employed when the actual drug, i.e., Topamax, used to treat a medical condition or disease is not approved by the US FDA. The US FDA will regulate how this prescription drug can be advertised or manufactured by the producing company. But, these same rules don't truly prohibit a health care provider from prescribing the drug for different medical conditions.

Prescription of a minimum amount of Topamax dosage for weight loss falls below an “off label” prescription. Topamax is primarily used to treat epilepsy and used, in minimal dosage, to forestall migraine headaches. But side effects have shown themselves in patients taking any amount of dosage and weight loss is one in every of them. To avoid the looks of those facet effects, health care suppliers recommend a small dose of but twenty five mg daily, split into 2 doses, which ought to be at least twelve hours apart. Don't expect a dramatic weight loss, though, as quantity of weight lost is still in proportion with a person's body weight.

Topamax has been prescribed for treatment of weight loss and obesity and to help within the decrease of the incidence of binge eating. However, prescription of Topamax for weight loss has additionally resulted in many undesirable facet effects. Health reports have noted that patients who have used Topamax for weight loss have experienced memory loss and issue in concentration.

These side effects build it more difficult to tolerate Topamax and create it tougher for the drug to figure effectively. This is the rationale why Topamax will not be approved by the US Food and Drug Administration as a recommended prescription drug for weight loss as a result of there's no balance. Prescribing Topamax has proven tricky because an intake of excess dosage will end in undesirable effects that may cause one thing more dangerous. Common side effects embrace a change in taste, diarrhea, nausea and dizziness. Dangerous side effects include memory problems, fatigue, confusion and impairment of fine motor skills.

If excess dosage or intake of topamax is ingested, complications could include an overdose, which is apparent through seizures, speech issues, blurred vision, loss of coordination, loss of consciousness and coma, muscle weakness and bone pain. As a result of of this, despite the result, any amount of Topamax dosage and weight loss is not a good combination. It could lead to undesirable results that can flip fatal.
